

LOGISTICS and MAXIMUM TRAILER SECURITY

throughout Europe from our 24/7 Operations Center

Your trailers and goods? Provide protection anytime, anywhere

The protection of transported goods can't merely be entrusted to a satellite tracking system – independent surveillance must also be provided for semitrailers, trailers, pallets, crates and containers that are unhooked and released, monitoring goods even as they are being moved away from the tractor.

For further protection for cargo compartments, on-board satellite systems can be combined with specific electro-mechanical locking systems controlled from our OPERATIONS CENTER, providing a tried and proven telematic seal of protection. (Product Family LockMatix)

Sometimes even the most sophisticated protection systems can be evaded or tampered with, resulting in goods being stolen. Multiprotexion makes available specific removable, compact and self-powered solutions for your high-risk goods (fashion garments, tobacco products, pharmaceuticals, hi-tech gear, etc.), so that even if the goods are stolen from the vehicle, the cargo can be tracked down – and often found – thanks to hidden localizers.

SECURITY SOLUTIONS FOR TRUCKS, TRACTORS, VANS.
